**Rinse**

- Rinsing is accomplished in the same manner as washing. Fresh water is added to a slow spinning load. Then the load moves through the spray rinses. The water is then drained away and the rinsing process is repeated. The number of rinses varies depending on the cycle.
- During the last rinse, fabric softener is dispensed into the bottom of the tub and applied to the load.

**Final Spin**

- The last of the rinse water is drained and the load is spun. The amount of spinning depends on the cycle selected.

To make unloading easy, the load is peeled off the sides of the basket by the CALYPSO™ wash motion.

**Normal Sounds**

As with any new product, you will hear sounds that you are not accustomed to. You may hear various sounds occurring during the washing, rinsing and spinning process. Between changes in wash actions, there will be momentary pauses. You will hear water spraying and splashing during the wash and rinse cycles. These new sounds and pauses are part of normal washer operation. See "Troubleshooting."

**Options**

Use options to customize your wash cycles.

**Rinse & Spin**

Use this option to get a combination of rinses and spins followed by a high-speed spin. The time display will include an estimate of how long it will take to fill and drain the washer. Fabric softener can be added to the Fabric Softener dispenser.

**When to use Rinse & Spin**

- For loads that need rinsing only.
- For completing a cycle after the power has been off.
- To add fabric softener to load.

**To use or change Rinse & Spin settings:**

- Add fabric softener to the dispenser (if desired).
- Press the RINSE & SPIN control until the RINSE & SPIN indicator light glows.
- Press START.

**Soak**

Use this option for set-in stains and soil that need extra time for removal. Soaking in this washer is different than in a conventional washer. The washer sprays the load with water and detergent for 4 minutes at extra low spin speed followed by a brief period of wash action at the speed of the selected cycle. Then another 4 minutes of spraying and extra low spinning occurs. The wash action then pauses for the detergent to work on the soils. The SOAK feature is followed by the selected cycle. Using SOAK will extend your wash cycle by 16 minutes.

**Extra Rinse**

Selecting this option provides a second rinse with the same water temperature as selected for the first rinse. An Extra Rinse can be added to any wash cycle.

**Extend Spin**

This option adds an additional 3 minutes of spin to any cycle to reduce drying time and save energy. If you select EXTEND SPIN and do not select a wash cycle, you will get an 8 minute, high-speed spin.

**Wash/Rinse Temp**

Select a water temperature based on the type of load you are washing. Use the warmest wash water safe for fabrics. Follow garment label instructions.

Warm rinses leave the loads drier than cold rinses. Warm rinses increase wrinkling. In cold climates, a warm rinse makes the load more comfortable to handle. Cold rinses save energy.

**Temperature Guide**

Wash Water Temperature	Suggested Fabrics
HOT	Whites and pastels Heavy soils
WARM	Bright colors Moderate to light soils
COLD	Colors that bleed or fade Light soils

In wash water temperatures colder than 60°F (15.5°C), detergents do not dissolve well. Soils may be difficult to remove.
